SUMMARY

Unity developer with 5+ years shipping mobile games for iOS and Android, from prototype to live operation. I build gameplay, progression and UI, and the systems live games run on: save and cloud data, sign-in, Addressables, LiveOps and monetization. Most recently on Love Eden (4.7 App Store rating, 100K+ Google Play installs).

SKILLS

Unity & C#: C#, Unity 6, Unity 2022 LTS, URP, uGUI, Shader Graph, DOTween, Editor tooling, Unity Localization
Architecture: Zenject, StrangeIoC (MVCS), DI, SOLID, design patterns, UniTask, unit testing, code review
Optimization: Unity Profiler, Memory Profiler, Frame Debugger, draw call and GC reduction, pooling, IL2CPP
LiveOps & Backend: Addressables, Unity CCD, PlayFab, Firebase, Remote Config, A/B testing, REST APIs
Monetization: Unity IAP, RevenueCat, subscriptions, AppLovin MAX, AdMob, ironSource, AppsFlyer, Amplitude
Multiplayer & Tools: Netcode for GameObjects, Unity Relay, Mirror, Git, CI/CD (Jenkins, Fastlane), Claude Code

EXPERIENCE

Senior Unity Developer | United Tech (Noderno Limited), İzmir — Jan 2025 – Sep 2026

Love Eden: Chapters of Romance, a live interactive-romance game for iOS and Android, seven-engineer team

- Rebuilt **save, cloud data and sign-in** on the live game with no data loss: save time from 0.5–2 s to 0.1–0.3 s, 85% fewer API calls, plus account switching, Apple and Google sign-in and account recovery.
- Owned **character customization**, the game's main player-driven spend: five avatar slots, a gem store with cart, rewarded-ad unlocks and real-money themed sets sold during events.
- Built the **LiveOps event framework** behind every seasonal campaign, so new events ship through remote config with no client release; shipped subscriptions, battle pass and A/B-tested offers.
- Built **player-facing features**: a premium character with its own scene and relationship progression, daily quests, achievements, the mailbox and the popup system that decides what each session shows.
- Shipped an **LLM-powered AI companion chat** to production: per-character personalities, conversation memory, streamed replies, subscription gating and in-chat moderation.
- Split a 7,140-entry **Addressables** catalog into four domains behind a ~200 KB boot catalog on Unity CCD, cutting startup work and removing assets duplicated across bundles.

Game Developer | Veloxia Technology, İzmir — Mar 2021 – Oct 2024

Casual and idle games: Space Colony, Shipping Life, Match Monsters!, Money Dash, Market Master

- **Shipped and live-operated five titles** from prototype to post-launch: gameplay, progression, UI flows, level pipelines in 2D and 3D, seasonal events, cloud save and leaderboards.
- Architected Shipping Life on **Zenject dependency injection** with an event-driven runtime, and moved a large legacy codebase onto the same structure.
- Owned **monetization and analytics**: Unity IAP, RevenueCat, mediation across five ad networks, Firebase and OneSignal; moved content to Addressables and optimized for low-end Android.

PROJECTS

- **Open-source Unity packages (2026):** Save System (crash-safe saves), Janitor (lifetime-safe async and events), UIDirector (UI navigation) and AddressablesDirector (asset loading) at github.com/ecanakli, with docs and samples.
- **Gavel (in development):** Real-time 1v1 online card game on Netcode for GameObjects and Unity Relay.

EDUCATION

B.Sc. Software Engineering, Yaşar University, İzmir — 2020
Associate Degree, Computer Programming, Ege University, İzmir — 2014

Languages: Turkish (native), English (professional working proficiency). Military service completed.
